

Seek the Truth for yourself because...

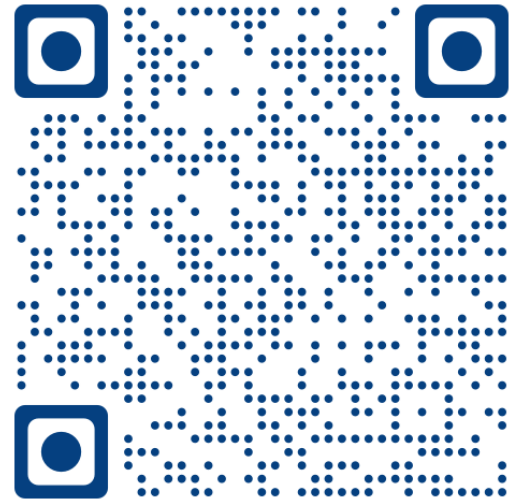

Your Government is Lying to You

(And the media is complicit.)

- As exposed by Dr. Michael Yeadon, UK scientist and researcher

Dr. Yeadon's Qualifications:

Degree in Biochemistry & Toxicology
PhD in Respiratory Pharmacology
32 years experience in pharmaceutical industry – Former VP of Pfizer
10 years experience in biotechnology sector
Founded, grew and sold his own biotech company: Ziarco
Independent advisor to over 30 start-up biotechnology companies

The Eight Covid Lies:

#1 SARS-CoV-2 is an exceedingly deadly virus.

(Fact: It is on par with a regular bad flu season - Source: Dr. John Ioannidis, Stanford University)

#2 There are no treatments available.

(Fact: As early as April, 2020 Dr. Fauci (as per his emails) was made aware of the successful use of Tirofiban/Aggrastat as a treatment. Many other treatments are available, including Hydroxychloroquin, Ivermectin and inhaled steroids.)

#3 The PCR "test" is valid.

(Fact: The inventor of the PCR process, Kary Mullis, stated that the PCR could not be used to diagnose disease, as it does not indicate illness or infectiousness. It has been manipulated to create false positives and drive fear. The CDC **has now acknowledged** that it is not valid.)

#4 Asymptomatic people can transmit disease.

(Fact: People without symptoms do not have enough of the virus to infect others. Only people with symptoms have enough of the virus to be contagious. Source: Dr. Michael Yeadon, immunologist)

#5 Masks are beneficial.

(Fact: The purpose of the masks was a psychological tactic to amplify fear. The virus is so small that it would pass right through the masks worn by the general population.)

#6 Lockdowns stop the spread of the virus.

(Fact: Only sick people can transmit - they generally stay home or are given a wide berth, if they appear in public. Viruses are primarily diseases of institutions, such as hospitals.)

#7 SARS-CoV-2 is a novel virus - never seen before.

(Fact: Not true. It is 80% similar to SARS-1 (2003) and 60% similar to common cold viruses.)

#8 The SARS-CoV-2 variants are dangerous.

(Fact: Viruses sometimes replicate with an error, called a 'variant', BUT the variant is so similar to the original virus that our natural T-cell immunity easily bridges the tiny gap and prevents illness.)
